

AI-Powered Continuous Monitoring

Continuous Insight. Zero Distractions

Genesis's AI-powered Continuous Monitoring starts by building a verified inventory of each vendor's assets before scanning. This ensures findings are tied to the right vendor, drastically reducing false positives and irrelevant alerts. The result is clear, accurate visibility that saves time and lets teams focus on real risks.

Features

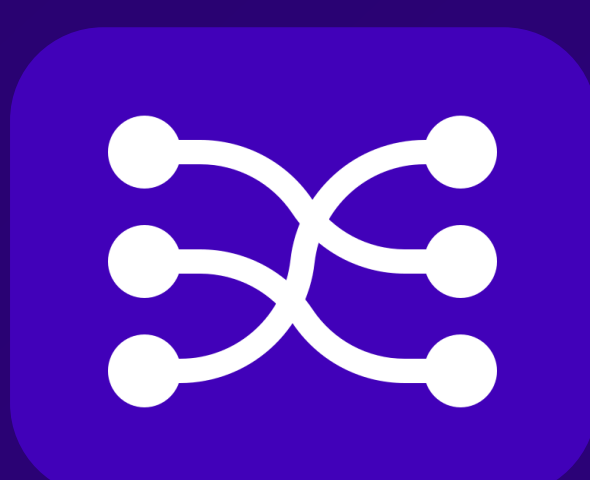

Verified Vendor Asset Inventory

Continuously builds an accurate inventory of vendor assets, ensuring findings are correctly mapped.

Continuous Asset Discovery

Detects and updates new assets in real-time to eliminate blind spots.

Noise-Free Risk Correlation

Cuts false positives to under 5% by linking findings to the right vendor and filtering irrelevant alerts.

Inside-Out Risk Validation

Combines external threat intel with vendor evidence for true visibility.

Exposure Monitoring

Tracks breaches, leaks, and dark web presence, alerting only on verified vendor exposures.

Benefits

Stay focused on what matters

Trusted Accuracy

Verified findings linked to the right vendor.

Clear Visibility

Streamlined risks without alert fatigue.

Faster Response

Validated evidence for quicker action.

Proactive Protection

Catch breaches and leaks before impact.

Overcoming Legacy Monitoring

- **Noise Overload** → Verified Asset Ownership: focus only on real vendor assets.
- **Blind Spots** → Continuous Discovery: instant visibility of new assets.
- **Slow Validation** → Inside-Out Validation: align vendor reports with external intelligence.
- **Reactive Detection** → Proactive Exposure Monitoring: anticipate breaches and leaks, not just react.
